

Raju Varanasi, General Manager Centre for Learning Innovation, addressed the Digital Education Revolution NSW Teachers' Forum at the close of Day 1. He reflected on the presentations, events and outcomes of the day.

### **My reflections on Day 1**

L4L - to me it means connectedness, collaboration and mobility. That's my way of saying www - whatever, whenever and wherever.

With L4L, the classroom dynamic will change remarkably. Learning strategies should make good use of connectedness, collaboration and mobility.

Teachers need to allow students to be even more participative (remember passive consumption of content is so Web 1.0).

The link between technology and pedagogy will come to the fore.

For "telling" mode of pedagogy - technology will not be an enabler - marginal use of laptops !!

For pedagogy that includes interactive, collaborative learning - technology will be an enabler, great potential for use of laptops.

There are great examples of engaging content and interactivity in every KLA - from English Grammar to Extension Mathematics. Examples from CLI are available through TaLe, CLAS, Writer's Talk, Science Talk, Dynamic Calculus etc.

There is even more opportunity to personalise for the diversity of skills the learners bring to the learning process.

[A recent Web 2.0 report](#) might be of interest to you -  
The graphs exemplify the promise and the reality.
